Addiction will not normally publish commentaries, editorials or reviews from authors with a specific conflict of interest in relation to the topic of the article.

To submit an article to Addiction please read our requirements and ethical principles below and submit your paper using our [online system](#). We aim to get a response to authors within 12 weeks.

Before submitting your manuscript, consider checking it with Penelope, an online tool that checks the completeness of scientific manuscripts, by using the button below. Penelope checks your Word document in two minutes and does not share or store your document. Penelope was developed by Penelope Research (www.peneloperesearch.com) in collaboration with the EQUATOR Network.

Check Manuscript

For further guidance on Addiction's priorities when considering articles please see [Addiction's priorities when evaluating submissions](#).

Addiction prefers authors to delay publicising the findings of submitted papers until the peer review process is finished. This is mainly to avoid confusion should peer review reveal that findings, as stated, are not borne out.

Ethical Approval

The study was approved by The University of Bristol's Institutional Review Board. All participants provided informed consent.

Looks good

You have mentioned an Ethical Review Board

Author tool

10

Patients taking 50 mg a day showed had significantly lower blood pressure than the control group ($t(27) = 0.41, p < 0.05$; Figure 5A).

Check this

Is this correct? The t statistic and degrees of freedom are not consistent with the given p -value.

Strengths and Limitations

- The validation cohort included patients with a varied aetiology of chronic liver disease.
- This study was performed at a single academic centre that may limit its applicability.

Check this

You have addressed strengths and limitations, but this should go after your abstract.

Checks

Sections and Statements	Overall document structure, abstract structure, funding information, data availability.
Author information	Names and institutions included and verified. Contact information. Institutional email addresses.
Ethical issues	Disclosures of interest, registration IDs, ethical approval, named ethics board, informed consent, previous retractions.
Statistics & Methods	Double check common hypothesis tests, confidence intervals. Randomisation, blinding, power calculations (WIP).
Figures, tables, and referencing	In or out, cross check main text with legends and reference list.
